LAMBDA CONTROL ENVIRONMENT (LFE™) *delivers on the technology connectivity promise.*

Las Vegas, Nevada, October 5, 2009: LAMBDA TD Software, Inc., the manufacturer and software developer of the first patented open system home automation and controls, announced today that they are uniquely able to deliver on the technology connectivity promise. At the 2007 CES Trade Show in Las Vegas, Nevada, Bill Gates, Founder of Microsoft, Inc., in his Keynote Speech, explained, *“That alone is not enough. There are some key things missing, and in particular the key thing missing is the connection. Delivering on connected experiences requires more than just great hardware. So consumer electronics has been defined to be a much broader industry. The content people now need to think about how they create around this environment, how they connect into it. It's an environment where people want to do things across multiple devices, working with many other people.”*

Robert Corcoran, LAMBDA TD company spokesman, related, *“Very soon from now, major changes will occur in today's technology formats. And we will all be positively affected. It will also make it important for Consumer Electronics manufacturers to build products that integrate within VPN (Virtual Private Networks), and then appropriately, have the ability to tie together communities through the Internet (World Wide Web). This capability is just one of the things that make the LAMBDA LCE unique as a Home Automation and Control System. While our competition can automate a single family dwelling, they cannot effectively, nor efficiently tie together a MDU (Multiple Dwelling Units), high-rise buildings, or even a Home Owner's Association (HOA) community. Our patented web-based home automation and controls product, the LAMBDA LCE, was designed specifically to create connected households, businesses, schools, hospitals, and municipalities.*

We are the only home automation and controls system that works much like the Facebook model. We are a consumer electronics and industrial products integrator that can build private communities.”

LAMBDA TD Software, Inc. (<http://www.lambdatdsoftware.com/>) is an established corporation based out of Las Vegas, Nevada. The company was founded in 2006 and provides home automation, security and surveillance products and services to both commercial and residential customers. The flagship product, LCE (Lambda Control Environment), is the first patented open system, open architecture remote control system designed for homes, businesses, schools, hospitals, and municipalities.
